

LONESOME DOVE CONCRETE PUMPING, LLC

Montana's Material Placement Specialist!

High Speed Material Placement *for Rock, Soil, Sand, & Bark*

Conveyor placement of construction and landscape materials is the fastest way to accurately spread aggregate, soil and groundcover materials on your jobsite. Not only is this service convenient, but cost effective, too.

We would love to show you how we can save you time, back labor and material cost, and keep your project on time and on budget.

Common Uses for Conveyor Application:

- Concrete flatwork*
- Basement fill*
- Trench backfill*
- Ground leveling*
- Retaining wall backfill*
- Drainage tiles*
- Playground surfacing*
- Landscaping*
- Driveways*
- Gardens - soil placement*
- Steep slopes - erosion control*
- Sidewalk grading*

Keep your project on time and on budget

Saves You Time

Reduce large jobs down to minutes and save valuable time and energy wasted on hand spreading of heavy materials. Our equipment can place gravel, sand, soil or mulch materials at distances of up to 90 feet from the truck allowing you to reach difficult to reach areas in very little time.

Saves You Hassle & Back Labor

What can be easier? One phone call and product is delivered and spread for you, and you can leave the wheelbarrow in the shed! All material used is self contained within our delivery system which means no piles to clean up, either. No shoveling and no back breaking labor... It doesn't get much better.

Saves You Material Costs

Construction and landscape materials are costly, and uneven spreading of these materials can result in money thrown away in excess volume. With conveyor application, spreading becomes a more precise placement that reduces unnecessary waste of bulk materials. This can save you at least 10% or more on material use which puts money back in your pocket.
